## Garbage disposal project of Indonesian Traditional Market.

### -Combat proposal of AAI Co. Ltd.

There are around 10,000 Traditional market inside Indonesia. Recently in Indonesia lots of modern super market has been established but these old traditional market totally different than modern super market. Inside these traditional market such as like farmers, fisherman and producers can sell their products directly to the customers. This traditional market can be call as base market of different types of product.

Jokowi the new president of Indonesia has been announced his new policy about waste disposal for traditional super market. The policy is 3R for waste disposal. Waste disposal project will be held in different places of traditional super market. Local government is also part of waste disposal project.

AAI co. ltd, PT AWINA and SMEs Ministry of Indonesia is going to establish new Incubation which name is **SAMURAI Incubation**. This incubation will help Indonesian Sme company to start up and skill up their business. On the other hand Incubation will also give all kind of support to Japanese corporation to start up their business in Indonesia.

The theme of Samurai Incubation is "THE PROBLEM OF WASTE DISPOSAL IN INDONESIA". Waste disposal is really the biggest problem in Indonesia. For that reason Samurai Incubator will work to resolve waste disposal.

Samurai Incubator has already started their work to resolve waste disposal pilot project by collaborate with Japanese corporation. These waste disposal pilot projects will be held in JAKARTA city, BANDON city and BUKASHI city.

If this projects will finish successfully it will help to the government to consistent their waste disposal policy, as waste disposal is also big problem for community in Indonesia Samurai waste disposal project will help to reduce this problem. In near future lots of employment can be created by implementing waste disposal project. On the other hand Japanese corporation has big chance to transfer their waste disposal technology to Indonesia. Japanese corporation has also chance to sell their disposal plant by producing locally.

There is also chance to enhance their business and exports to other ASEAN countries as well. Republic of Indonesia has a 40% of the ASEAN population and it has a population bonus from 2015-2030. The average population age is 28 and it is one of the big resources.

AAI Corporation is to promote and contribute of sixth-order industrialization of these abundance resources in collaboration with Japanese companies.
